

WARP Simulation

(status report)

A MonteCarlo program for light simulation in WARP

A.G.Cocco and R.Santorelli WARP-TM/2003-01

A study of the electric field in WARP 2.3 liter prototype

A.G.Cocco R.Santorelli A.Szelc WARP-TM/2004-01

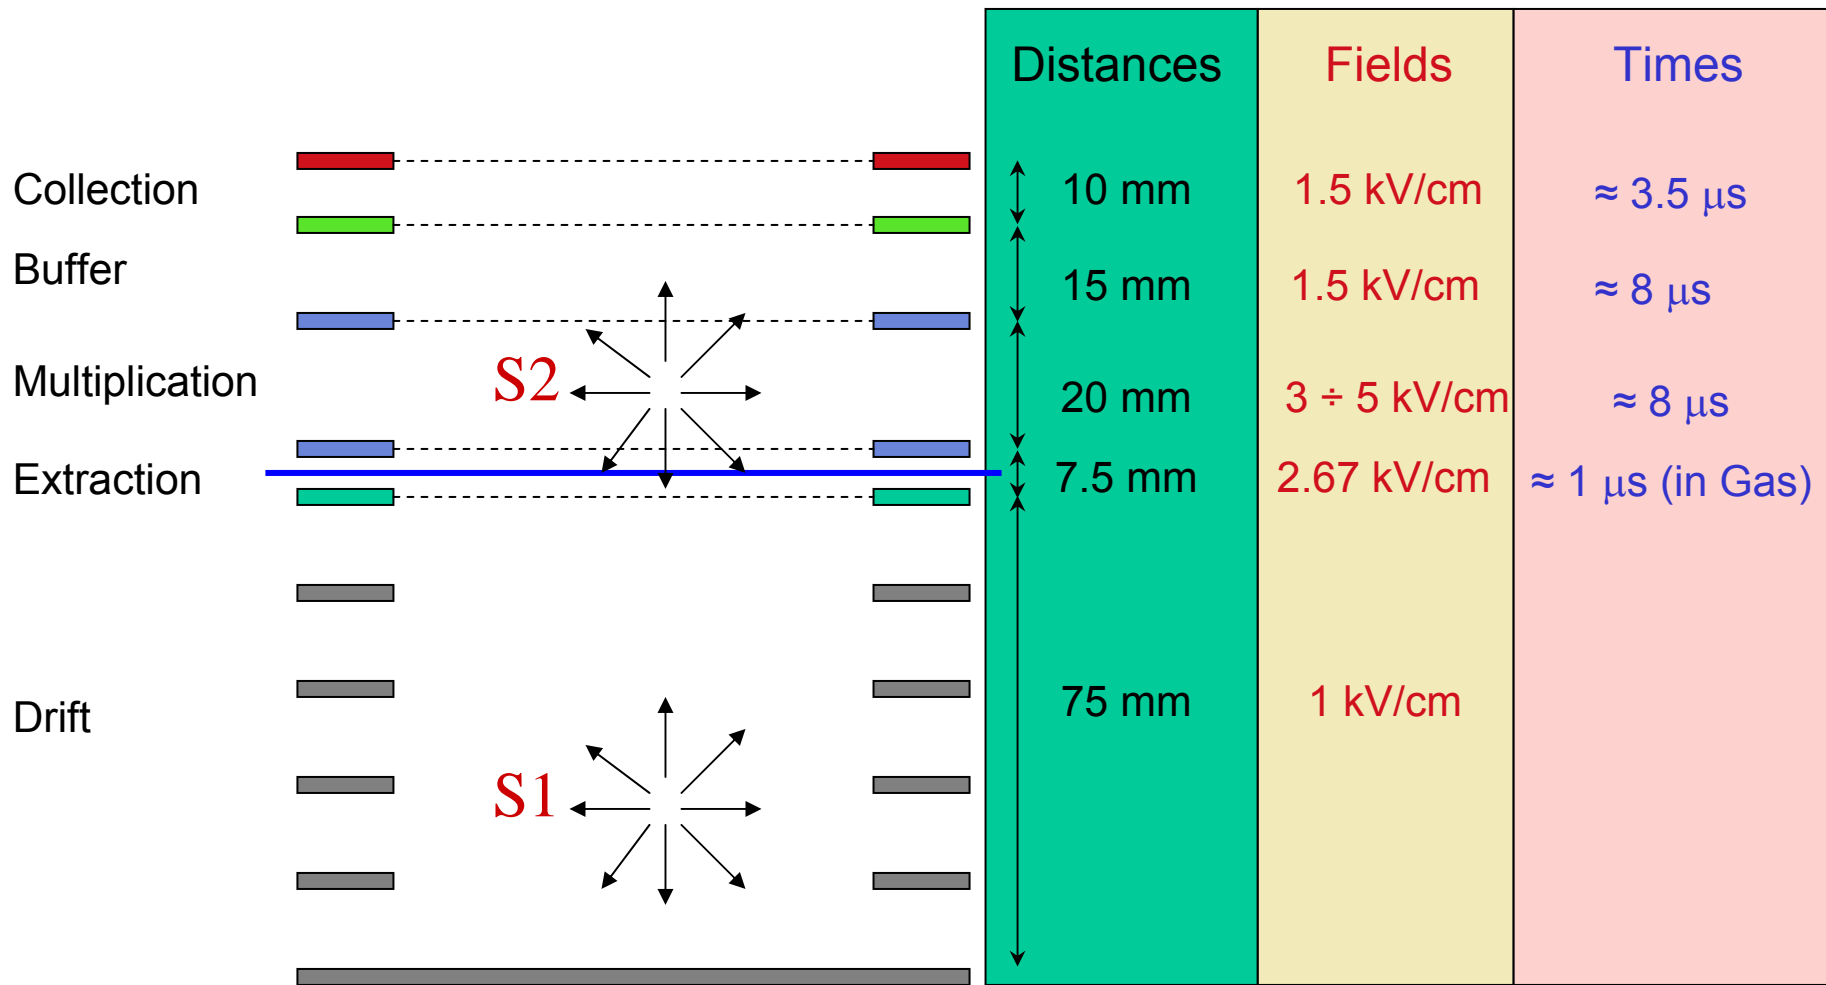

Geant 3.21 simulation of the WARP 2.3 liter prototype

A.G.Cocco R.Santorelli

Simulation of the electron transport and scintillation
light production in gas Argon

A.G.Cocco A.Szelc

New grids scheme

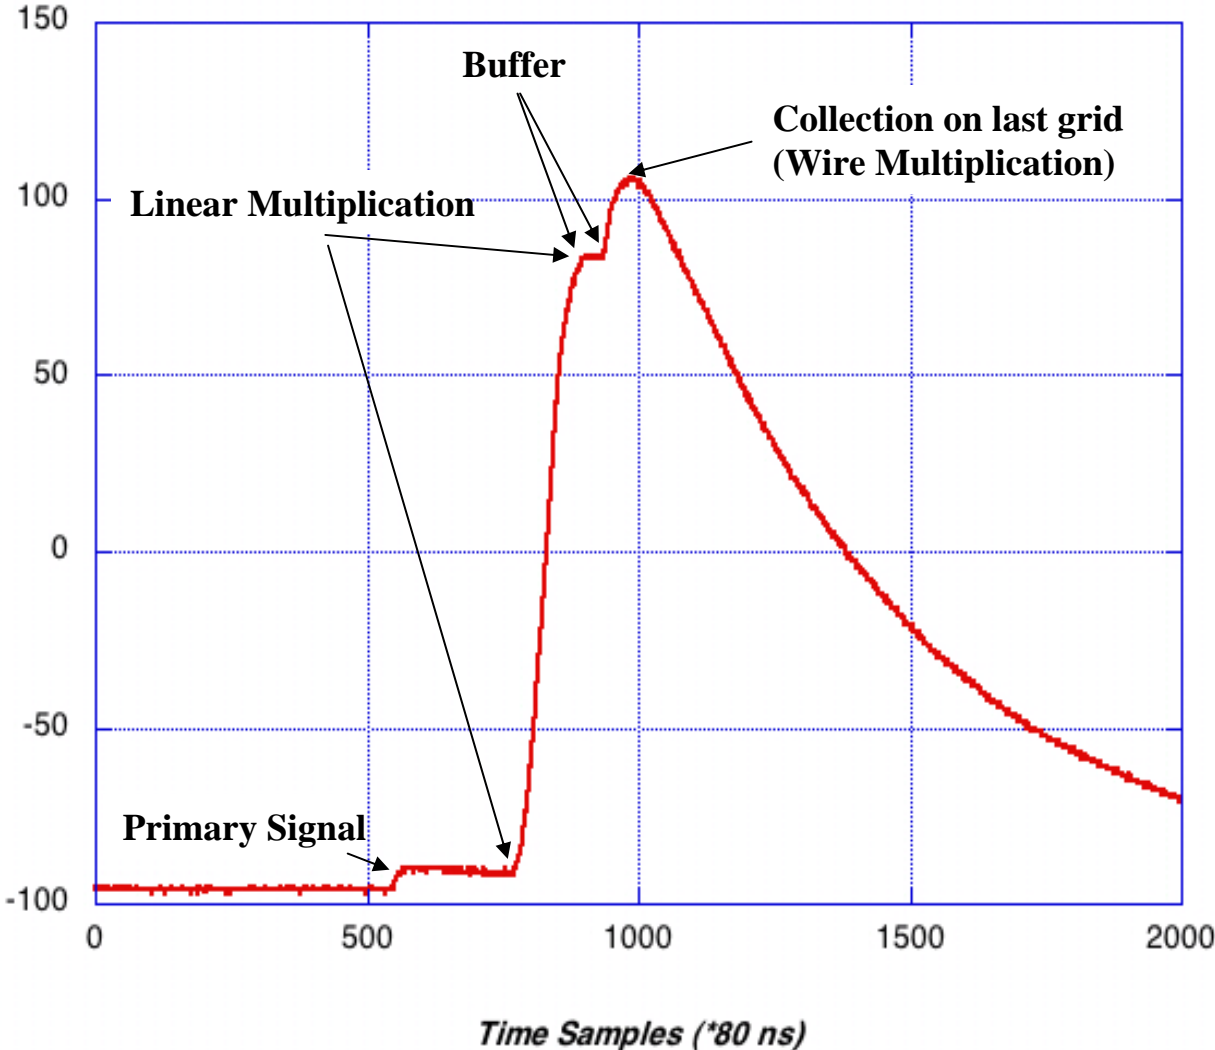

Max ΔV across the grids ≈ 17 kV

Expected S2/S1 in the linear multiplication region ≈ 20

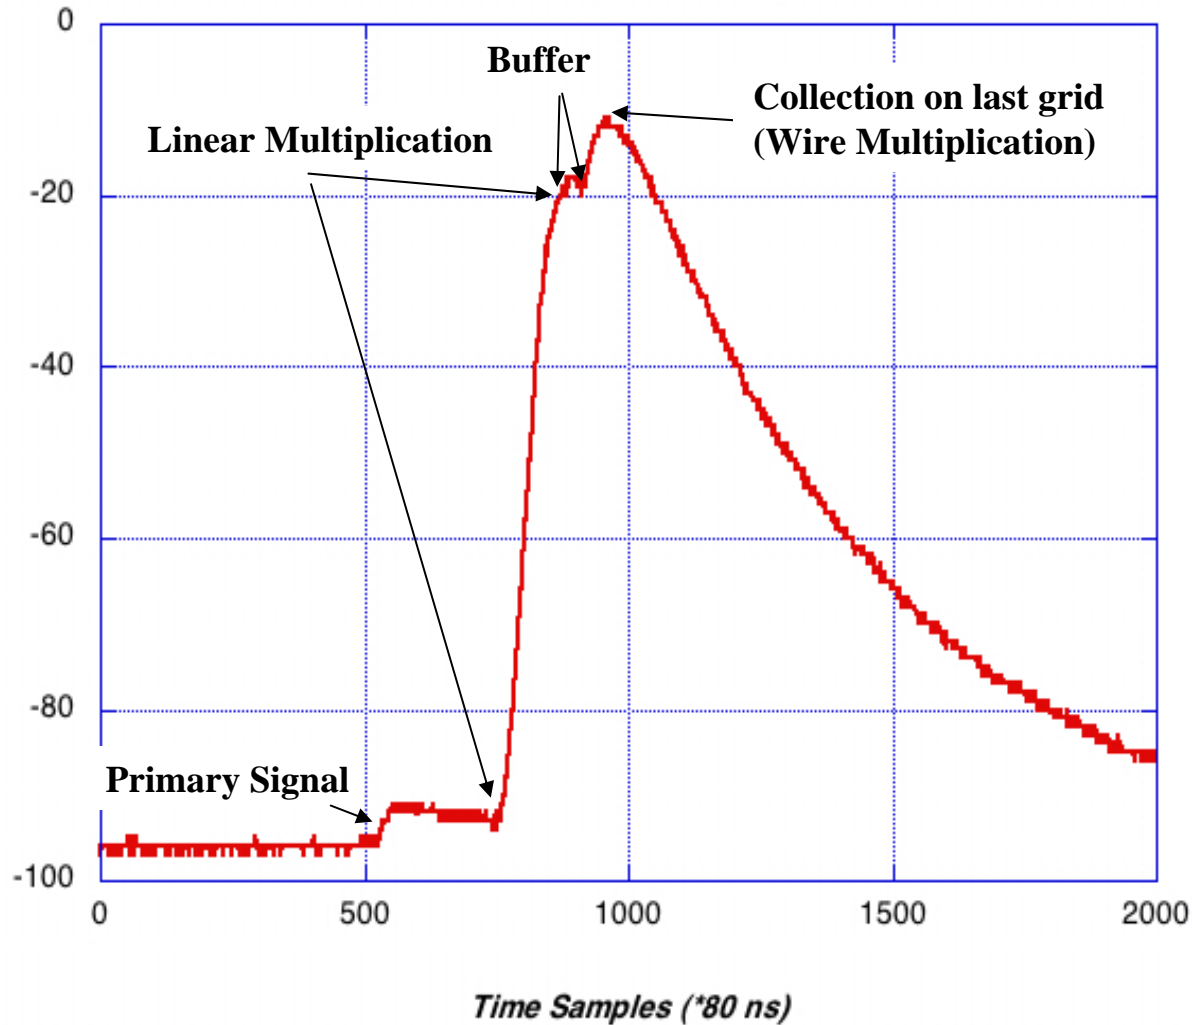

Signals with the new grids scheme

"Good Signal" Example

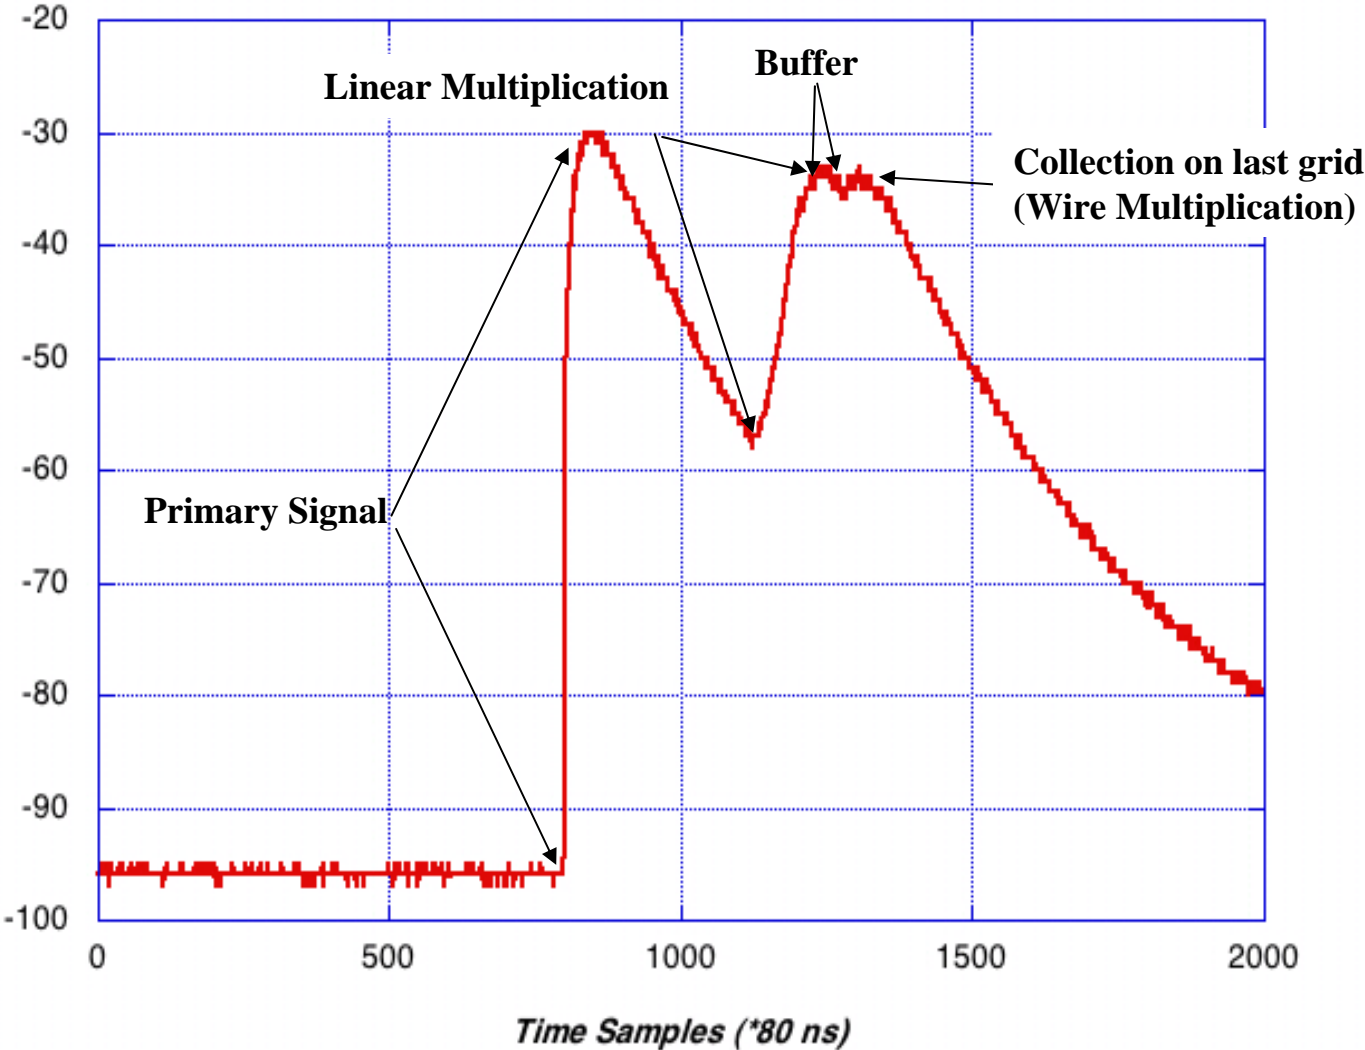

Signals with the new grids scheme

"Good Signal" Example

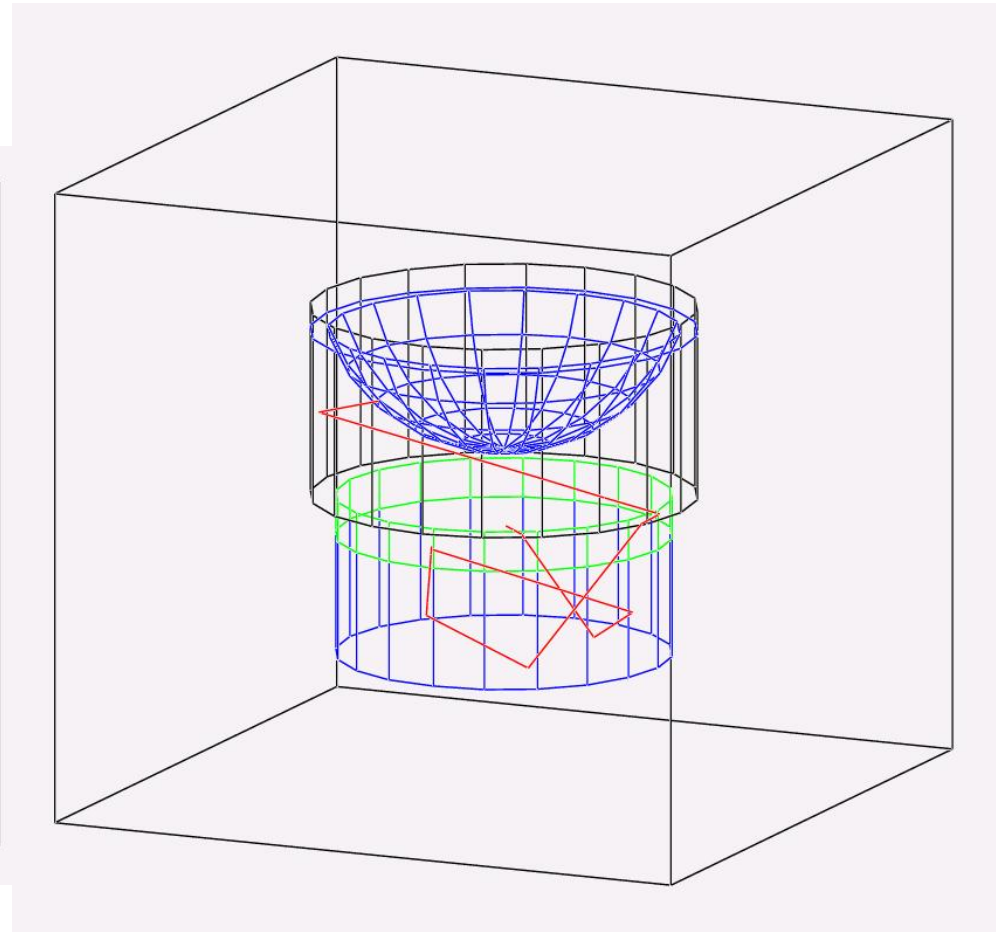

Signals with the new grids scheme

"Alpha Signal" Example

MonteCarlo program for light simulation in WARP

Raytracing

S1 efficiency vs R and Z

Study of the electric field in WARP 2.3 liter prototype

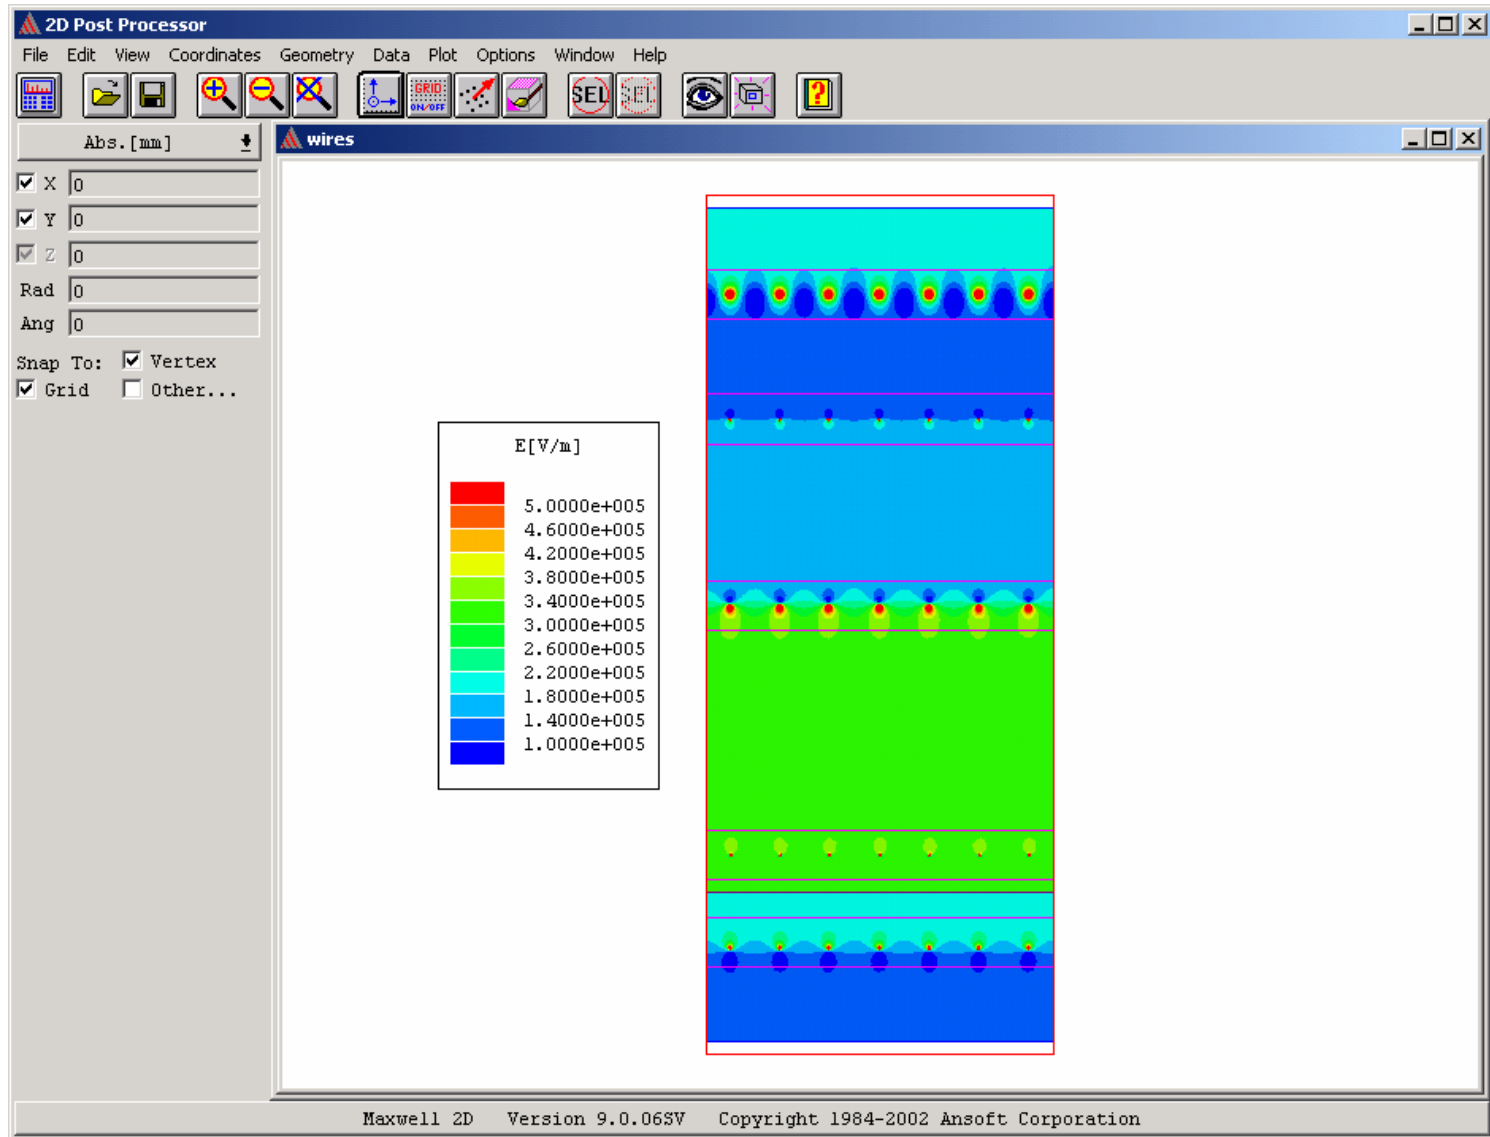

Maxwell 3D

(Ansoft Co.)

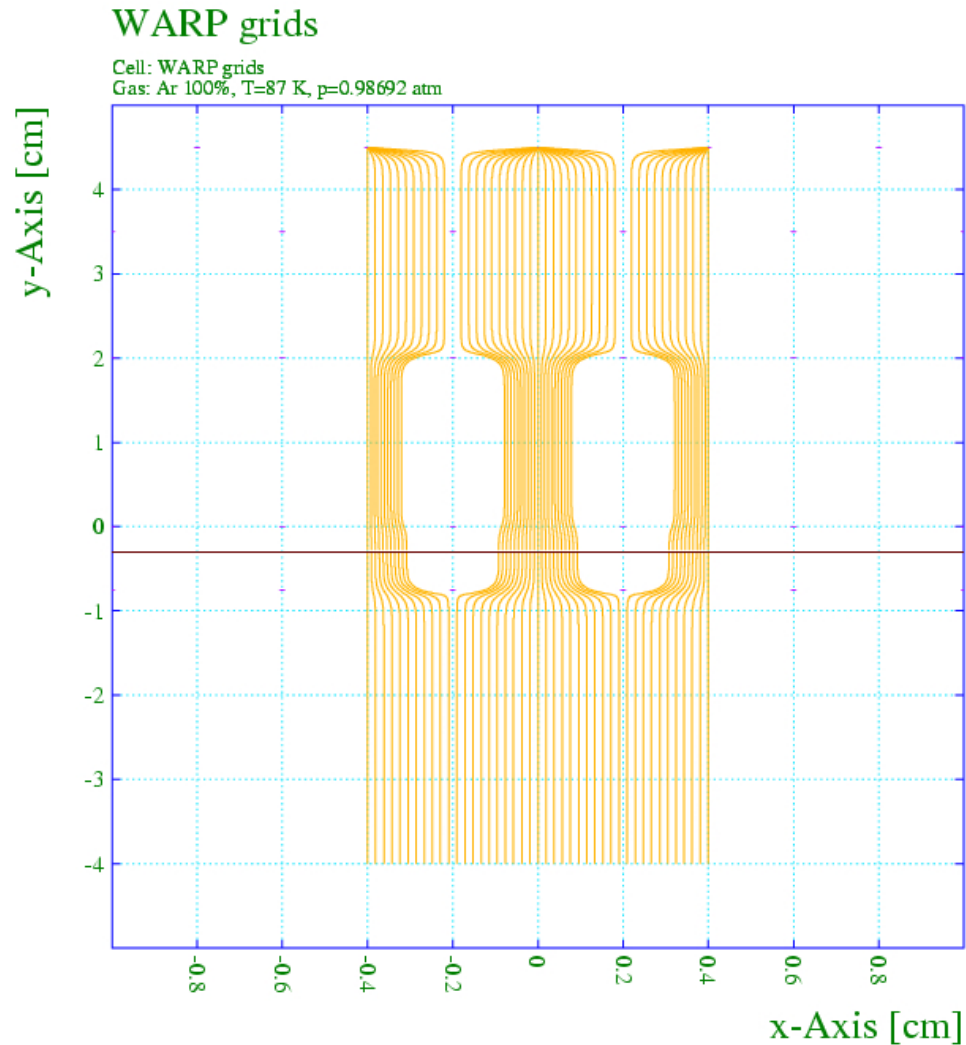

Full 3D simulation of the 2.3 liter setup

Maxwell 3D post-processor

Garfield electron drift lines

Plotted at: 11.34.57 on 23/01/04 with Garfield version 7.10.

WARP 100 liter prototype

WARP 100 liter prototype

WARP 100 liter setup

Next steps

- 2.3 liter
 - implement the 7 2" PMT (new setup)
 - evaluation of the efficiencies on S1 and S2
- 100 liter
 - setup optimization (number of PMTs)
 - light collection efficiency
 - study of position resolution
- Complete the study and the simulation on the production of scintillation light in gas Argon
